

Zero Carbon Tatura Pillars

The Plan comprises six key pillars within an overarching theme of our community.

Energy

How do we power our homes, businesses and industry sustainably?

Transport

How do we sustainably move ourselves, our public transport, and our goods?

Buildings

How do we reduce energy used in our buildings, while making them more comfortable and cheaper?

Waste

How do we eliminate sending waste to landfill? Converting it into valuable products.

Industry

How can our industries further reduce carbon emissions while increasing production?

Agriculture and Land Use

How can we implement best practice agriculture and increase carbon storage in our soils?

ZERO CARBON TATURA

What is Zero Carbon Tatura?

Zero Carbon Tatura is a community group that aims to transition Tatura to zero carbon emissions by 2030.

The Zero Carbon Tatura Vision

Our vision is that the community of Tatura in 2030 will have:

- Transitioned to a low carbon economy through low carbon emission industries and primary production
- Adopted best management practice in energy efficiency
- Universal access to low cost, equitable renewable energy
- Embodied sustainable living practices that are fit for purpose
- Developed a community model of harmony, cooperation and sharing

The Zero Carbon Tatura Plan

A Plan has been developed to guide the journey to zero emissions.

Why get involved?

ZCT can share knowledge of what you can do right now to reduce emissions and energy costs.

We understand some changes are harder to make than others. We want to work with you to help everyone understand what we need to do as a community to move to zero emissions. We can then work together to achieve solutions.

We also want to understand what the barriers to reducing carbon emissions are, and how to address these barriers as a community.

How do I get involved?

ZCT will work with our community to develop projects and share knowledge in-person at events, online, and in our local media. Read our regular contributions in the Tatura Bulletin.
